DETAILED ACTION

Claim Objections

1. Claims 1-7, 15 are objected to because of the following informalities: In claims 1, 6, 7, 15 should "staring point" be "starting point?". Appropriate correction is required.

Allowable Subject Matter

2. Claims 1-19 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: Claims 1-19 are allowable over cited prior art. Applicants teach a speech data compression/expansion apparatus, comprising, a dictionary data input for extracting speech data containing waveform data from an existing speech waveform dictionary and inputting the extracted speech data, a compression position determining part for specifying a part used for speech synthesis in the waveform data, and setting a starting point and an ending point for compression before and after the part, a dictionary data compression part for compressing the waveform data with respect to a compression interval specified by the starting point and the ending point for compression, and, a dictionary data expansion part

Art Unit: 2654

for expanding the compressed waveform data, wherein the specified compression interval, in which an expansion result of the compressed waveform data has highest quality, is determined as a compression/expansion position, and the compressed waveform data, and the starting point and the ending point for compression are registered in a database as the waveform data used for speech synthesis. The closest cited prior alone or in combination fails to teach the claimed combination of features.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Gersho et al., (6,311,154) teach adaptive windows for analysis-by-synthesis CELP-type speech coding.

Miki et al., (5,396,576) teach speech coding and decoding methods using adaptive and random code books.

Heidari et al., 96,055,496) teach vector quantization in CELP speech coder.

Navarro et al., (5,899,968) teach a speech coding method using synthesis analysis using iterative calculation of excitation weights.

Thyssen (6,480,822) teaches low complexity random codebook structure.

4. This application is in condition for allowance except for the following formal matters:

See objections to the claims above.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
